

Homework

Plant propagation is the easiest and most economical way to share plants with your friends, neighbors, and classmates.

Look around your yard or at your houseplants (or your friends or neighbors yards—be sure to ask permission) and identify some plants that you can use one of the sexual and/or asexual propagation techniques below to share with others. Bring at least 2 propagated plant items to share with the EMGV's to use in their annual plant sale.

Be sure all plants are labeled properly with the common and Latin name of the plant and any other relevant information.

Sexual Propagation:

1. Seeds (have them dried, placed in a sealed envelope)
2. Sprouted seedlings

Asexual Propagation:

3. Cuttings
4. Cuttings/rooted and started
5. Division
